Figure 1 consists of five histograms, labeled A, B, C, D, and E, showing the distribution of the number of non-zero elements in the rows of the matrices. The x-axis for all histograms is 'Number of non-zero elements' ranging from 0 to 100. The y-axis is 'Frequency' ranging from 0 to 100. The distributions are as follows:

- Matrix A:** The distribution is highly skewed towards zero, with a peak frequency of approximately 100 at 10 non-zero elements.
- Matrix B:** The distribution is also skewed towards zero, with a peak frequency of approximately 100 at 10 non-zero elements.
- Matrix C:** The distribution is skewed towards zero, with a peak frequency of approximately 100 at 10 non-zero elements.
- Matrix D:** The distribution is skewed towards zero, with a peak frequency of approximately 100 at 10 non-zero elements.
- Matrix E:** The distribution is skewed towards zero, with a peak frequency of approximately 100 at 10 non-zero elements.
